SCIENCE IN BIOMEDICAL TECHNOLOGY

BMET 337: DRUG DELIVERY SYSTEMS

STREAMS:

TIME: 2 HOURS

DAY/DATE: WEDNESDAY 07/07/2021

11.30 A.M- 1.30 P.M

INSTRUCTIONS: Answer question *one* and *any other two* questions

Questions

Question 1 (Compulsory) (30 marks)

- Explain 5 limitations of conventional drug delivery systems. (5 marks).
- Describe the difference between Rate- Preprogrammed Drug Delivery System and Activation- Modulated Drug Delivery System. (4 Marks)
- Explain the role of microspheres in drug delivery and targeting. (5 Marks)
- Outline 5 formulation of microparticulates for intraocular drug delivery. (5 Marks)
- Explain 7 factors affecting percutaneous drug absorption. (7 Marks)
- Highlight 4 features of adeno-associated virus that make it suitable tool for gene transfer in gene therapy (4 Marks)

Question 2 (20 marks)

- Describe in detail the various release mechanisms employed in diffusion-controlled drug delivery and targeting. (10 Marks)
- Discuss the demerits associated with oral drug delivery systems. (10 marks)

Question 3 (20 marks)

- a) Discuss 5 properties of an “ideal” drug delivery system. (10 Marks)
- b) Describe with appropriate examples the use of liposomes in drug delivery and targeting. (10 marks)

Question 4 (20 marks)

- a) Using an appropriate diagram, outline the principles of iontophoresis. (10 marks)
- b) Describe the structure, composition and clinical application of Zoladex implant. (10 marks)
